CHATGPT

CHATGPT OVERVIEW

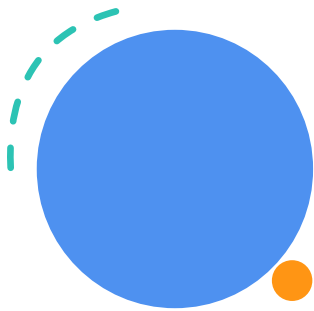

ChatGPT is widely used Chatbot or simply saying It is a type of virtual Assistant which can interact with humans and provide solutions virtually. It is developed by OpenAI and today it is most popular AI Tool used by peoples.

Now a days almost everyone is using ChatGPT for their work including Primary Going school kids.

ChatGPT has some advantages along with some disadvantages which is covered below.

How is ChatGPT helping People?

- ChatGPT is capable of finishing complex tasks within a couple of minutes which can take days to finish.
- Being Machine Oriented, It is almost free of human silly errors.
- The Productivity and the Quality of task is at such a great level that even skilled professionals feel challenged.
- Unlike Humans it can work 24/7 and Accessment only needs a stable Internet Connection.
- Program Debugging is easier, therefore helps in saving a lot of time of programmers.

Critical Analysis of ChatGPT

ChatGPT is an AI Assistant that uses all information present on the internet for its accurate and best results. But it is very bad for the students Because when a student is given homework / Projects / Assignment etc. They seek help from ChatGPT thus making them less productive and more dependent.

Life is not about taking shortcuts; A Reward is always the product of Hardships and Efforts. Taking shortcut won't develop Anybody's skillset.

Using of ChatGPT when one has the ability to solve the problem on its own is harmful. If one has to develop Skills and attain excellence, practice can never be skipped.

It affects Students 'study life, making young students being dumb day by day.

A student should learn problem solving skills. there is a tough life ahead waiting for him. if they fail in competing with the changing world, the life will be miserable for sure instead of using ChatGPT for their upgradation ,people use it for escaping hard work. Which is making them Lazy & Dependent.

Conclusion

Technology, If used wisely can be a boon to a person. ChatGPT is truly a wonderful innovation of this era. It will bring Revolution in the IT world and open new chapters of human history.

The effort that one has to do should be done by oneselves only, not by AI.

"The one who has a pain in stomach has to eat medicine himself, taking pills by somebody else won't cure the pain" Use Technology wisely.
